1 OVERVIEW

SG72A module is a communication port conversion module which allows the conversion of USB<->RS232, USB <-> RS485, USB<->LINK (Smartgen special). It is power supplied by USB port of PC.
2 FUNCTION AND CASE DIMENSION

1 USB<->RS232;
2 USB<->RS485;
3 USB<->LINK (Smartgen special port, TTL level port)
4 Case dimension: 72mm*51mm*27mm (length * width * height)

3 DRIVER INSTALLATION

1. Do not connect SG72A to USB port before installation.
2. Find out the driver file that is provided by Smartgen, the file name is “SG72 Driver Windows.exe”.

Note: The driver is compatible with Windows 2000, Windows XP and Windows 7 only.
3. Connect the SG72A module to the PC via USB port. Double click the file to open it and then the screen should now display as follow:
4. Click the “Extract” button and the screen should now display as follow:

5. Click the “Next” button and the screen should now display as follow:

6. SG72A module driver installation was successful and “Finish” button should be clicked to confirm the installation.
7. After installation, on the desktop, right-click “My Computer” and then select “Properties”.

8. Select “hardware” item in “system properties” dialog, and then click “device manager”. The screen should now display as follow:
9. Click the “+” symbol before the “Ports (COM & LPT)”. The screen should now display as follow:

10. SG72A module is shown as “USB serial port (COM[x])” as it fits with USB communication port. Here is shown as COM3 (It will show different COM port according to different computer, e.g. COM4, COM5, COM6). The screen should now display as follow:
11. “USB serial port (COM3)” will disappear immediately if SG72A is disconnected with PC while appear again if SG72A is connected with PC. This operation can help identify the generated COM port after the SG72 is connected.

For example: Here we take HGM6300 test software as example. In “Communication/Security”, change the COM port as same as the generated COM port in device manager. The screen should now display as follow:

![Diagram](image)

Make sure that the COM port of ① and ② are consistent.

⚠️ **NOTE:**

1. If there is no “Found New Hardware” indication during installation, please check whether the USB port is normal. If it is normal, SG72A Power light is illuminated. Overload on USB port will cause that computer can not provide power for USB device. If above situation occurs, please change another USB port.

2. If new hardware installation wizard is shut down during installation, re-plug the USB device is OK.
